Translation of the original operating instructions for path-controlled tackers

SLIDER 4C-L50  SLIDER 4C-Z50
SLIDER 5C-Q67  SLIDER 5C-Z75
These operating instructions will help you to operate the path-controlled tackers in the Slider 4C and Slider 5C series
• correctly in accordance with their intended use,
• safely and
• cost-effectively.

These tools are referred to simply as Sliders in these operating instructions.

We assume that every person using the Slider has knowledge of how to handle pneumatic tools. People who do not have this knowledge must be instructed by an experienced user about how to operate the Slider.

These operating instructions are intended for the following persons:
• Persons who operate this Slider
• Persons who clean this Slider, and/or
• Persons who dispose of this Slider.

All of these persons must have read and understood the contents of these operating instructions.

These operating instructions are considered a part of the product. Always keep them near the Slider. Pass on the operating instructions if you sell the Slider or hand it on in any other manner.

Layout characteristics

General layout characteristics
Various elements in the operating instructions are marked with specific layout characteristics. They make it easy for you see whether you are reading normal text,
• lists or
• actions.

Tips contain additional information such as specific information on the cost-effective use of the Slider.

Features of the danger warnings
All danger warnings in these operating instructions are based on the same pattern. On the left you will find a symbol indicating the type of danger. To the right of that you will see a signal word which identifies the severity of the danger. Below this, you will see a description of the source of the danger and information on how you can avoid this danger.

⚠️ DANGER
Notices with the word DANGER indicate hazards which can directly lead to serious or even fatal injuries.

⚠️ WARNING
Notices with the word WARNING indicate hazards that can lead to serious or even fatal injuries.

⚠️ CAUTION
Notices with the word CAUTION indicate hazards that can lead to minor or moderate injuries.

Features of the notices on damage to property or the environment

⚠️ CAUTION
These notices indicate hazards that can lead to damage to property or the environment.
Safety

Observe and follow all the warnings and instructions in these operating instructions and those on the Slider when using the Slider. The enclosed spare parts list and declaration of conformity are an integral part of these operating instructions.

Correct use
The path-controlled tackers – Slider 4C and Slider 5C – are used to drive fasteners into panel-like building materials such as wooden panels, gypsum fibreboard and OSB boards in order to fit them to wooden frames. Sliders may only be used on other materials after consultation with the manufacturer.

Correct use also includes complying with the health and safety regulations, legal regulations and/or standards applicable at the site of use. Any other type of use shall not be deemed correct use and may lead to damage to property or even injury to persons.

Improper use
Improper use refers, in particular, to operation
- by persons without any knowledge of how to use the Slider,
- of the Slider with its safety devices overridden,
- of Sliders modified without the authorisation of the manufacturer,
- with accessories other than those stipulated in these operating instructions for use,
- connected to compressed air sources not listed in these operating instructions for use,
- when the work involves movements across scaffolding, stairs, ladders or ladder-type structures,
- involving closing boxes or crates or attaching transport securing equipment.

PREBENA Wilfried Bornemann GmbH & Co. KG accepts no liability for any damage resulting from improper use.

Avoiding the risk of fatal injuries
- During the triggering sequence and whenever the Slider is connected to the air supply, ensure that no body parts are near the opening.
- Ensure that the fasteners are not driven into power cables.
- Never direct the Slider at people, animals or their body parts.
- Disconnect the tacker from the compressed air supply before handing it over to other persons.
- Do not allow children to play with packaging films – these pose a risk of suffocation.

Preventing the risk of explosion
- Do not use the Slider in potentially explosive areas.
- Never operate the Slider with oxygen or other explosive gases or gas mixtures.
- Only operate the Slider on suitable compressed air systems (see page 12).
- Only use the Slider if it is in perfect working order (see page 11).
**Avoiding the risk of injury**

- Wear suitable ear protection when operating the Slider.
- Wear suitable safety goggles when operating the Slider.
- Store the tacker out of the reach of children and other unauthorised persons.
- Disconnect the Slider from the compressed air supply before transportation, before performing any cleaning work, before loading and emptying the magazine and after operation.
- Always carry the Slider by the handle and never with the trigger activated.
- Make sure that you and any other persons in the danger area wear suitable protective equipment when operating the Slider.
- Hold the Slider in a way that eliminates any possibility of injury due to kickback.
- Only use the tacker if your footing is secure.
- Only use the Slider if you can guarantee the path you are taking is level.
- Never trigger the Slider in the open. This avoids the risk of any flying fasteners and of overloading the Slider.
- Only use fasteners which have been approved by the manufacturer.
- Take note of the workplace dimensions. The Slider may penetrate thin workpieces or slip off workpieces when working on corners and edges.

**WARNING**

Risk of injury when operating the Slider at workpiece edges.

- Ensure that there is enough distance between the opening and the edge of the workpiece.
- Ensure that the Slider is in perfect condition.
- Ensure that the Slider is guided in a straight line over the workpiece.
- Never trigger the Slider in the open. This avoids the risk of any flying fasteners and of overloading the Slider.

**Avoiding damage to the tacker**

- Never open the Slider housing. Always have repair work carried out by qualified PREBENA staff.
- Do not use the Slider if it has been dropped or is damaged. Have it inspected by qualified PREBENA staff before putting it into use again.
- Do not connect the Slider to a compressed air supply where the maximum operating pressure of 8.3 bar is exceeded.
- Position the Slider so that it cannot tip over during operation.
- Never trigger the Slider in the open. This avoids the risk of any flying fasteners and of overloading the Slider.
- Only use fasteners which have been approved by the manufacturer.

How it works

The Slider is a special tool for optimum guidance of pneumatic tackers. It makes working quicker, more comfortable and accurate. The tacker integrated into the Slider can be moved over the entire surface to be worked on, e.g. plasterboard, gypsum fibreboard or other wood-based panels, without a great deal of effort. The Slider can be automatically triggered at any time with a single shot for fixing panels or path-controlled in four easily adjustable staple distances of 40 mm, 60 mm, 80 mm or 110 mm. The Slider comprises two trigger levers on both of the handles at the side of the tool (each with a trigger button for single shot and a continuous operation trigger lever), which also makes it suitable for two-man operation. A guide sight slot (V-notch sight) on both sides and an adjustable parallel guide with a rule up to 140 mm enable the operator to aim easily and keep on track. As standard, the tool comes with an empty shot safety device, adjustable exhaust hood and a safety castor on the bottom of the tool which keeps it away from the material prior to triggering. A carrying handle makes it easy to transport. No electrical connection is required since the Slider is only controlled pneumatically or mechanically. The Slider is also designed to comply with the 30° staple angle required in Eurocode 5.
Product features
The Slider has the following features:
- Single shot possible at any time
- Empty shot safety device
- Can be used in both directions
- Path-controlled continuous triggering
- Distance adjustment mechanism for 40, 60, 80 or 110 mm
- Guide sight slot (V-notch sight)
- Adjustable parallel guide
- Trigger lock
- Quick coupler on tool
- Depth control via spacer plates
- No run marks due to wheels
- Adjustable exhaust

Safety devices
Contact castor
The Slider is equipped with a safety castor (17) underneath which only allows triggering when the tool is set down.

⚠️ WARNING
Risk of injury when operating the Slider at workpiece edges.
- Never trigger the Slider in the open. This avoids the risk of any flying fasteners and of overloading the Slider.
- Ensure that the opening is over the workpiece before triggering.

Trigger lever
The Slider only triggers when the trigger lever (4) is actuated (with the exception of the single shot function). These levers are located on the left-hand and right-hand side of the handle.

⚠️ DANGER
THE SLIDER IS FITTED WITH SAFETY DEVICES. THESE MUST NEVER BE DEACTIVATED!
Information signs on the Slider

Next to the rating plate, there are five pictograms affixed to the Slider. These have the following meanings:

<table>
<thead>
<tr>
<th>Label</th>
<th>Meaning</th>
<th>Label</th>
<th>Meaning</th>
</tr>
</thead>
<tbody>
<tr>
<td>🧑‍🎤</td>

<td>Made in Germany</td>
</tr>
</tbody>
</table>

The following uses are not permitted:

- Work requiring movements across scaffolding, stairs, ladders or ladder-type structures and
- Work involving closing boxes or crates or attaching transport securing equipment.

The corresponding warning symbol is adhered to the front of the tacker.

Information on the rating plate

The rating plate is adhered to the Slider housing. It contains the following information:

<table>
<thead>
<tr>
<th>Slider rating plate</th>
</tr>
</thead>
<tbody>
<tr>

Preparing the Slider

Unpacking the Slider

► Place the packaging upright before opening it.
► Open the lid of the packaging.
► Carefully lift the Slider out of the packaging using the handle and place it down in an upright position.
► Remove all packaging material from the Slider.

⚠️ WARNING
There is a risk of suffocation for children playing with packaging films.
► Do not allow children to play with packaging films.
► Keep the packaging material out of the reach of children.

► Save the packaging material for later use.

Checking the condition

⚠️ WARNING
There is a risk of injury when operating a damaged Slider or if the accessories are not correctly attached.
► Check the condition of the Slider before each use.
► Ensure that the Slider is in perfect condition.

► Check the following points in particular:
  • Are all parts of the Slider and all accessory parts securely attached?
  • Are the safety devices free from any damage?
  • Are all accessible screwed connections tight?
  • Is the compressed air connection free from damage?
  • Are the control elements free from any damage?
  • Are the hose connections free from any damage?

⚠️ Scratches on the housing paint do not constitute damage.

► Do not connect a damaged Slider to the compressed air supply.
► Have a damaged Slider repaired by qualified PREBENA staff before putting it into operation.

⚠️ CAUTION
Damaged hose connections can burst and cause injury or damage to property.
► Check the hose connections for damage before connecting them.
Connecting the Slider to the compressed air supply

You can connect the Slider to a compressor or a compressed air system.

Operation with a compressor or a compressed air system is only permitted if the following preconditions are met:

- The operating pressure of the compressor or compressed air system must not be more than 10% above the maximum operating pressure of the Slider. You can find information on the maximum operating pressure of the Slider on the rating plate.
- On compressed air systems with higher pressure, a pressure regulating valve (pressure reducer) with a downstream pressure relief valve must be installed in the compressed air line.
- The compressed air must be filtered, dry and lubricated with PREBENA special nailer oil.
- At the outlets for the compressed air line to the Slider, a compressed air maintenance unit must be installed on the coupling side. It should contain
  - a filter,
  - a water separator and
  - an oiler.
- If no oiler is installed, the length of the air line to the tacker must not exceed 10 m. Otherwise, three to five drops of PREBENA special nailer oil must be filled directly into the air inlet of the Slider every day prior to operation.
- The compressed air system must be able to maintain the operating pressure even during the required air removal.
- The inner diameter of the air line must be at least 9 mm.
- The connection for the Slider must be equipped with a quick-action coupling, ID 7.2, and have an inner diameter of at least 7.5 mm.

**CAUTION**

Operation on compressed air systems that do not meet the above-mentioned preconditions can lead to damage to the Slider.

- Only operate the Slider on suitable compressed air systems.
- Only use the Slider if it is in perfect working order.

- Check the condition of the Slider (see page 11).
- Check the connection for the compressed air hose for foreign matter and contamination and clean it if necessary.
- Set the operating pressure at the pressure regulator of the compressor to 6.0 – 8.3 bar.

**WARNING**

Accidental triggering when connecting to the compressed air supply can lead to serious or even fatal injuries.

- Ensure that no body parts are near the opening.
- Never direct the Slider at people, animals or their body parts.
- Empty the magazine prior to connection.

**CAUTION**

Damaged hose lines can burst and cause injury.

- Check the compressed air system and the Slider for damage before connecting them.
- Only connect the Slider to a functioning compressed air system.
CAUTION
Damaged hose lines can burst and cause damage to property due to compressed air escaping.
- Check the compressed air system and the Slider for damage before connecting them.
- Only connect the Slider to a functioning compressed air system.

- Push the quick coupler (1) of the compressed air hose onto the connection (2) until it audibly locks into place.

![Image of quick coupler and connection](image)

- Check the operating pressure on the pressure gauge of the compressor.
The maximum permissible operating pressure of the Slider is 8.3 bar.

Filling the magazine

WARNING
Accidental triggering when filling the magazine can lead to serious or even fatal injuries.
- Disconnect the Slider from the compressed air supply before inserting the fasteners.
- Ensure that no body parts are near the opening.
- Never direct the Slider at people, animals or their body parts.

CAUTION
Using the wrong fasteners can lead to injury, impair the proper functioning of the Slider or damage the Slider.
- Only use the PREBENA fasteners listed in the section on "Ordering accessories" (see page 29 onwards).

CAUTION
Risk of crushing from spring-loaded pusher.
- Take hold of the pusher and slowly let it slide forwards.
Carry out the following work steps to fill the magazine:

- Disconnect the Slider from the compressed air supply.
- Pull the pusher (24) back until it audibly locks into place at the detent pin (26).
- Insert the fasteners (25) into the magazine with the legs pointing downwards.
- Push the fasteners as far as they will go to the left into the inlet.
- Take hold of the pusher (24).
- Release the pusher (24) by applying pressure to the detent pin (26).
- Slowly let the pusher slide forwards slightly.

The pusher makes contact with the fasteners and pushes them forwards.

- When the fasteners hit the front stop of the magazine, release the pusher.

The magazine is now filled.

**Adjusting the exhaust outlet**

The Slider is equipped with an adjustable exhaust outlet (2).

- To adjust the exhaust outlet, turn the adjusting wheel (2) in the required direction.
- Turn the vent so that you or other persons are not in direct line of the exhaust air.
Checking the function
To ensure that the Slider is functioning correctly, proceed as follows when starting it for the first time:

**CAUTION**
- Note the danger warnings in the section on “Safety” from page 19 onwards.

**CAUTION**
When operating the Slider, there is a risk of injury or damage to property.
- Note the safety instructions in the section on "Safety" from page 19 onwards.

- Place the Slider 4C on a piece of wood at least 60 mm thick and the Slider 5C on a piece of wood at least 85 mm thick.
- Release the Slider (see section on “Driving in the fasteners” from page 19 onwards).
- Check the following properties:
  - Triggering only takes place when the trigger lock is pressed in.
  - Every time the tool is triggered, a fastener must be driven into the piece of wood.
  - The exhaust air must not be blown out into the face.
- To maintain the required driving depth, if necessary change the operating pressure or the number of spacer plates (see page 17 onwards).
- Repeat these steps if necessary.
The Slider is now ready to use.

Always try to work with the lowest possible operating pressure. This offers the following advantages:

- You save energy.
- You reduce the noise level.
- You reduce the wear on the Slider.
Operating the Slider

Proceed as follows to operate the Slider:

- Prepare the Slider as described from page 11 onwards.

Using the parallel guide or guide sight slot

Proceed as follows for operation with the built-in parallel guide (12) on the edge of a panel or using the guide sight slot (19) on a specified line:

- Open the clamping lever (9) by turning it two turns clockwise until the parallel guide (12) can be easily removed.
- Set the required distance using the scale on the rule.
- Close the clamping lever (9) by turning it anticlockwise.

The parallel guide (12) is now fixed in place.

- Push the two guide pins (11) down.
- Applying slight pressure, guide the Slider to the side against the edge of the panel in order to achieve optimum work results.
- You can return the parallel guide to its original position by carrying out these steps in reverse order.

- For operation using the guide sight slot (19), locate the line you created using the two V-notch sights (19) and follow the line.
- Make sure that the parallel guide (12) is in the original position.
Selecting the staple distance

You can adjust the distance between the individual fasteners for operation using continuous triggering. You can choose between distances of 40, 60, 80 or 110 mm. Proceed as follows to select the required distance:

**WARNING**
Accidental triggering when selecting the staple distance can lead to serious or even fatal injuries.

- Disconnect the Slider from the compressed air supply before selecting the distance.
- Ensure that no body parts are near the opening.
- Never direct the Slider at people, animals or their body parts.

- Open the coupling (15) by moving the lever down.
- Pull up the detent pin (24) and hold it there.

The distance adjustment mechanism is now unlocked.

The distances are marked on the housing.

- Slide the distance adjustment mechanism (14) until you have selected the required distance. The tip of the distance adjustment mechanism (14) shows the distance selected.
- Release the detent pin (27) again.
- Make sure that the detent pin (27) is fully locked into place.
- Now close the coupling (15) by moving the lever up.

The staple distance is now selected.

Adjusting the driving depth

You can adjust the driving depth of the fasteners in the material by regulating the operating pressure or by inserting or removing spacer plates.

Regulating the driving depth via the operating pressure

You can adjust the driving depth of the fasteners in the material by regulating the operating pressure. At a higher operating pressure, the fasteners are driven in deeper and at a lower operating pressure, they are not driven in as deep.

Adjust the operating pressure so that the required driving depth is reached exactly. This offers the following advantages:

- You save energy (compressed air),
- You reduce the noise level, and
- You reduce the wear on the tacker.
Proceed as follows to adjust the operating pressure:

- Adjust the pressure at the pressure valve of the compressor or of the pressure system.
- Note the pressure gauge on the compressor or the pressure system.

**Regulating the driving depth with spacer plates**

You can adjust the driving depth of the fasteners in the material by inserting or removing spacer plates in different positions. Six spacer plates, each 1 mm thick, are included in the delivery. When fitted, each spacer plate increases the opening distance to the material by 1 mm.

Proceed as follows to set depth control:

- Undo the M4 bolts (using a 3 mm Allen key) on the handle of the Slider until they are loose but do not fall out.
- Undo the M5 bolts (using a 4 mm Allen key) on the underside of the Slider until you can lift up the tacker and insert or remove the spacer plates (8) as shown in the diagram.
- Note the direction in which the spacer plates are fitted (8).
- Make sure that the spacer plates (8) are evenly distributed.
- After inserting/removing the plates, retighten all the bolts.

**CAUTION**

- Only use the tool included in the delivery and the spacer plates supplied.

**Checking the driving depth**

- Place the Slider down on a sample piece of wood of adequate size with the same properties as the material to be worked on.
- Check the setting by triggering a single shot on the sample material.
- Repeat these steps until the required driving depth is set.
Driving in fasteners

**WARNING**
Risk of injury due to electric shock.
- Before triggering the Slider, ensure that no power cables can be struck.

**WARNING**
During operation, injuries to the eyes and other body parts are possible due to flying splinters.
- Wear suitable safety goggles and suitable protective clothing during operation.
- Observe the valid health and safety regulations.

**WARNING**
Loud operating noises can cause damage to hearing.
- Wear suitable ear protection.
- Observe the valid noise protection regulations.
- Select the lowest possible operating pressure.

**WARNING**
Risk of injury when fasteners slide off or are driven in too far, or due to kickback.
- Never trigger the Slider in the open. This avoids the risk of any flying fasteners and of overloading the Slider.
- Take note of the workplace dimensions. The Slider may penetrate thin workpieces or slip off workpieces when working on corners and edges.
- Ensure that the driving depth is not set deeper than the thickness of the piece of wood.

When fasteners are driven into workpieces that are too hard, or into other fasteners, a powerful kickback is generated. This can cause the Slider to slip off or jump.

The driving depth of the fasteners depends on the hardness and thickness of the piece of wood, the set operating pressure and the spacer plates fitted.
- Ensure that there are no persons behind the piece of wood.
- Then check the function of the tacker at a low operating pressure by triggering it once.
- Regulate the operating pressure according to the strength of the wood used.

The correct operating pressure is set when the required driving depth of the fasteners is achieved at the lowest possible pressure.
You can easily trigger the Slider at any time or continuously at the selected staple distances.

Triggering a single shot
Proceed as follows to trigger the Slider for a single shot:
- Place the Slider on the workpiece to be worked on.
- If desired (at any time), press the trigger button (3) to trigger a single shot.
A fastener is driven into the workpiece.

This function is used to fix the workpiece to corners, for example.

Continuous triggering
Proceed as follows to trigger the Slider continuously:
- Place the Slider on the workpiece to be worked on.
- Hold onto the continuous operation trigger lever (4) and push/pull the Slider in the required direction to start path-controlled triggering. In so doing, the Slider triggers at the distance you have set.
- Ensure that the working speed is appropriate and constant.
- Avoid any jerky movements for optimum work results.
- Reduce the working speed depending on the distance selected
  (40 mm = slower to 110 mm = faster) to avoid damage caused by overloading the Slider.

⚠️ WARNING
Risk of injury when operating the Slider at workpiece edges.
- Ensure that there is enough distance between the opening and the edge of the workpiece.
- Ensure that the Slider is in perfect condition.
- Ensure that the Slider is guided in a straight line over the workpiece.
- Never trigger the Slider in the open. This avoids the risk of any flying fasteners and of overloading the Slider.
Releasing jams

The Slider has a cover plate on the tool lug. This can be used to remove any jammed or deformed fasteners from the tool lug.

**WARNING**

Note the following information before dealing with jamming problems:

- Disconnect the Slider from the compressed air supply.
- Empty the magazine.

Proceed as follows to remove a jammed fastener:

- Disconnect the Slider from the compressed air supply.
- Empty the magazine (see page 23).
- Pull out the parallel guide as far as it will go.
- Open the clip lock (13) by pushing it down.
- Open the clip.
- Open the cover plate.
- Remove the jammed or deformed fastener.
- Close the cover plate.
- Push the clip into the intended holder.
- Push the clip lock (13) up.

**CAUTION**

- Risk of injury from the clip lock not being locked.
- Ensure that the clip is in the intended holder and that the clip lock is locked in place.

- Fill the magazine (see page 13).
- Connect the Slider to a suitable compressed air supply.
- Place the Slider 4C on a piece of wood at least 60 mm thick and the Slider 5C on a piece of wood at least 85 mm thick.
- Check that it functions correctly (see page 15).
**Reloading the magazine (empty shot safety device)**

The Slider is equipped with an empty shot safety device. This prevents you from being able to trigger the Slider if there are no more fasteners in the magazine.

If the empty shot safety device has been triggered, you cannot drive in any more fasteners.

- Fill the magazine as described from page 13 onwards.

The Slider is equipped with an empty shot safety device (10) which is actuated by the pusher (22). This locks the Slider so that no more shots can be triggered. A small supply of staples remains in the magazine.
After operation

After operation, or during long periods when the tool is not in use, perform the steps described below.

Disconnecting the compressed air supply

- Pull the quick coupler of the compressed air hose away from the handle.
  The quick coupler is now released.
- Remove the compressed air hose from the connection on the Slider.
  The compressed air contained in the Slider escapes audibly.
- Set down the Slider and secure it so that it cannot inadvertently roll away.

Emptying the magazine

The magazine is never fully emptied due to the empty shot safety device. For this reason, you must remove the fasteners which have not been used from the magazine if you will no longer be using the tacker.

To do so, proceed as follows:

**WARNING**
Accidental triggering when emptying the magazine can lead to serious or even fatal injuries.
- Disconnect the Slider from the compressed air supply.

**CAUTION**
Risk of crushing from spring-loaded pusher.
- Take hold of the pusher and slowly let it slide forwards.

- Disconnect the Slider from the compressed air supply.
- Pull the pusher (22) back until it audibly locks into place at the detent pin (21).
- Remove the fasteners from the magazine by pulling them back and up.
- Take hold of the pusher (22).
- Release the pusher (22) by applying pressure to the detent pin (21).
- Slowly let the pusher slide forwards slightly.
- When the pusher reaches the front stop of the magazine, release the pusher.
- Set down the Slider and secure it so that it cannot inadvertently roll away.
Transporting and storing the Slider

Packing
Pack the Slider in its original cardboard box prior to storage or before the following types of transport:
- Distances of more than 10 m
- Transport over unstable ground
- Transport that involves an unusual posture.

Carry out the following preparatory steps:
- Disconnect the Slider from the compressed air supply (see page 23).
- Allow the pressure to be completely released from the Slider.
- Empty the magazine (see page 23).
- If necessary, clean the compressed air connections to remove any foreign matter and contamination.
- Place the Slider in the original cardboard box.

Transporting
The type of transport differs according to whether you are transporting the Slider over short or long distances.

Transport over short distances
Short distances are distances of a maximum of 10 metres.

**WARNING**
Accidental triggering can lead to serious or even fatal injuries.
- Disconnect the Slider from the compressed air supply every time it is transported (see page 23).
- Carry the Slider only by the handle.
- Do not touch the trigger during transport.

**CAUTION**
Impacts and knocks can result in damage to the tacker.
- Do not drop the tacker.
- Protect the tacker from knocking against obstacles.

- Disconnect the Slider from the pressure supply (see page 23).

Transport over long distances
The following distances for transporting the Slider are regarded as "long distances":
- Distances covered by transportation in a vehicle.
- Distances of more than 10 m,
- Transport over unstable ground and
- Transport that involves an unusual posture.

The Slider must only be transported over long distances in the original cardboard box.

Proceed as follows to transport the Slider over long distances:
Proceed as described on page 19, "After operation".
- Pack the Slider in the original cardboard box supplied.
- Carry the original cardboard box to the required location.
- Only set down the original cardboard box so that it is upright with the lid facing upwards.

Storing
- Oil all metal parts of the Slider thinly with PREBENA special oil.
- Pack the Slider in the original cardboard box.
- Store the Slider at room temperature in a dry place protected from dust.
Servicing the Slider

To always keep the Slider in perfect working condition, a number of regular services are required:

- A one-off service after 25 hours of operation.
- See the service table on page 21 for more service intervals.

The Slider must only be serviced by persons with the required knowledge, skills and experience. Any work not described here must only be carried out by the manufacturer’s customer service department or at the manufacturer.

- Ensure that there are no fasteners in the magazine before performing any servicing work.
- Disconnect the Slider from the compressed air supply.

One-off service after 25 hours of operation

- Check that all freely accessible screws and nuts are secure and, if necessary, tighten them.
- Clean the castors with a cloth dampered with a mild soap solution.
- Check the safety devices.
- Check all accessible hose connections.
- If there is no maintenance unit available, spray 10 to 15 drops of PREBENA special nailer oil, order no.: Z200.10 into the air supply for the tool.

CAUTION

There is a risk of environmental pollution if the lubricating oil is spilled.

- Absorb spilled oil with a binding agent.
- Wipe up absorbed oil with a cloth.
- Dispose of the cloth in accordance with the statutory regulations in force at the place of use.

CAUTION

The Slider could be damaged by using unsuitable or contaminated lubricants, or by using a blend of lubricants.

- Only use PREBENA special nailer oil, order no.: Z200.10.
- Never use unsuitable or contaminated lubricating oil.
- Do not mix different types of oil together.
- Dispose of used lubricating oils in an environmentally friendly manner.

Cleaning the housing and external surfaces

CAUTION

Unsuitable cleaning agents can cause damage to the Slider or accessories.

- Clean only with a dry or slightly damp cloth, or a cloth dampered with a mild soap solution.

Slight contamination

- Wipe the Slider housing with a dry cloth.
- Oil all metal parts of the Slider thinly with PREBENA special oil.

Heavy contamination

- Wipe the Slider housing with a cloth dampered slightly with a mild soap solution.
- Then wipe the housing with a cloth dampered slightly with tap water.
- Rub down with a soft, dry cloth afterwards.
- Oil all metal parts of the Slider thinly with PREBENA special oil.
Oiling the Slider

**CAUTION**
Insufficient lubrication or the use of the wrong lubricants can cause damage to the Slider.
- Use only PREBENA special nailer oil.

If no oiler is installed and the length of the air line to the tacker is over 10 m, sufficient lubrication is not guaranteed.

- In both cases, two to five drops of PREBENA special nailer oil must be filled directly into the connection for the compressed air source every day prior to operation.

**CAUTION**
There is a risk of environmental pollution if the lubricating oil is spilled
- Absorb spilled oil with a binding agent.
- Wipe up absorbed oil with a cloth.
- Dispose of the cloth in accordance with the statutory regulations in force at the place of use.

Faults

**WARNING**
Operation of damaged or malfunctioning Sliders can lead to serious or even fatal injuries.
- In case of a fault, immediately disconnect the Slider from the compressed air supply.
- Do not use the Slider until the fault has been corrected.

**CAUTION**
The Slider can be damaged if repairs are carried out by unauthorised persons.
- Ensure that repairs to the Slider are only carried out by the manufacturer.

Faults
If faults occur on the Slider that you are unable to rectify through lubrication and cleaning, you must notify PREBENA Service.
- Do not perform any repair work on the Slider.
- Ensure that all faults on the Slider are rectified by PREBENA Service.

Overview of faults
The following overview lists possible faults and the necessary measures.

<table>

## Ordering accessories

You can reorder accessories from the manufacturer (see page 30). Only use original PREBENA accessories and fasteners or accessories approved by PREBENA for operation of the Slider.

### Ordering fasteners

The Slider must only be used with the appropriate PREBENA staples shown on the rating plate.

### Explanation of the model designation

Example: Z50 C NK HA

<table>
<thead>
<tr>
<th>Abbreviation</th>
<th>Explanation</th>
</tr>
</thead>
<tbody>
<tr>
<td>Z50</td>
<td>PREBENA type and leg length</td>
</tr>
<tr>
<td>C</td>
<td>Leg cut; standard is C=chisel cut</td>
</tr>
<tr>
<td>NK</td>
<td>Wire quality; standard is NK=galvanised steel, SV=thick galvanised steel or RF=stainless and acid-resistant steel</td>
</tr>
<tr>
<td>HA</td>
<td>Resin coating</td>
</tr>
</tbody>
</table>

Other resin coatings or fastener wire qualities available upon request.
Consult PREBENA for more information on the model designation.

<table>
<thead>
<tr>
<th>Type</th>

</tr>
<tr>
<td></td>
<td>Extension arm for working in an upright position</td>
</tr>
</tbody>
</table>

You can find more accessories at [www.prebena.de](http://www.prebena.de)
CAUTION
Incorrect disposal results in environmental damage.

- Clean the Slider before disposing of it.
- Observe the valid regulations for the disposal of oil.

Never dispose of the Slider or parts of it with normal household rubbish. If you wish to dispose of the Slider, send it to PREBENA. PREBENA can guarantee the correct disposal of the Slider. Contact data can be found on page 30.

Manufacturer's address

PREBENA
Wilfried Bornemann GmbH & Co. KG
Befestigungstechnik
Seestraße 20–26
63679 Schotten, Germany
Telephone:  +49 (0) 60 44 / 96 01-100
Fax:  +49 (0) 60 44 / 96 01-820
E-mail:  info@prebena.de
Website:  www.prebena.de
**Warranty**

PREBENA shall provide a one-year warranty for the tool specified here starting from the date of sale in accordance with the following warranty conditions. PREBENA warrants the rectification of defects resulting from material or manufacturing defects free of charge. The free of charge warranty shall not cover faults or damage caused by improper handling.

Furthermore, only original PREBENA spare parts may be used; failure to comply with this requirement shall render the product liability and, therefore, the warranty claim null and void. The warranty shall not cover wear parts, e.g. O rings, etc. It shall be at the discretion of PREBENA to implement the warranty by replacing the defective part or arranging a replacement delivery. No further claims shall be accepted.

In order for the warranty to take effect, the certificate of warranty – completed in full – must be accompanied by the dealer's stamp and date of sale, or by an invoice document from which the dates and details to be listed in accordance with the certificate of warranty can be taken.

Shipment: The tool to which the claim relates must be packed carefully in order to avoid breakage during transport and sent postage paid to PREBENA.
